

NEWBORN BEHAVIORAL OBSERVATIONS (NBO) SYSTEM

Education & Training for Professionals

the women's
the royal women's hospital
victoria australia

**22 & 23 OCTOBER 2018
WELLINGTON, NZ**

Using the NBO system, clinicians help parents to bond with their baby as a unique person. In an NBO session, clinician and parents share observations of the nuances of baby's behavior and reflect on its meaning in terms of their capacities, struggles, needs and preferences. The neuro-behavioural observations in an NBO session allow parents to notice and offer the interactive support their infant needs for development, from birth to 3 months. Observations include the infant's:

- capacity to habituate to external light and sound stimuli (sleep protection)
- quality of motor tone and activity level
- capacity for self-regulation (including crying and consolability)
- visual, auditory and social-interactive capacities and preferences (alertness and responsiveness to human and non-human stimuli)

**VENUE: Wellington Hospital, Horne Lecture Theater,
WELLINGTON, NEW ZEALAND**

Twilight Workshop: Monday 22 October 2018

Full Day Workshop: Tuesday 23 October 2018

PLACES ARE VERY LIMITED!

Registrations via: <http://bit.ly/IMHAANZ2018NBO>

For more information email nboaustralia@thewomens.org.au

The 1.5 day NBO training program is relevant to a range of professionals who work with families with newborns and very young infants facing a range of difficulties, and in a range of settings including neonatal intensive care units, post-natal wards, mental health services, community clinics or home visiting programs.
